

### Lab3 Taosha Gao

1. `com.example.cs493.homework`
2. `GET_ACCOUNTS; READ_PROFILE; READ_CONTACTS; CALL_PHONE; SEND_SMS; ACCESS_FINE_LOCATION`
3. The algorithm first append string “@CS493” to the username, and then do the iteration:  
`int j=1; for(int i=0; i<newString.length(); i++) j=newString[i]*j%12345678;` the passcode is the value of j.  
For example, for the username `txg279`, the passcode generated is 2264850.
